Non-Polar Deserts

Non-polar deserts are arid or semi-arid regions outside of the polar circles that receive 25 cm (10 inches) or less of annual precipitation. Unlike polar deserts—which are locked in ice-cap or freezing climates—non-polar deserts span subtropical, temperate, and coastal zones and can experience very hot or cold temperatures.

Only deserts greater than 50,000 km2 (19,300 sq mi) are included.

Can you identify the 20 Deserts numerically marked on this world map?

	Arabian Desert		Great Salt Desert		Kyzylkum Desert		Simpson Desert
	Atacama Desert		Great Sandy Desert		Mojave Desert		Sonoran Desert
	Chalbi Desert		Great Victoria Desert		Ogaden Desert		Taklamakan Desert
	Chihuahuan Desert		Kalahari Desert		Patagonian Desert		Tanami Desert
	Gobi Desert		Karakum Desert		Sahara Desert		Thar Desert
